CONTRACT WOLF

*Security Assessment*

# ChewySwap DEX

Verified on 08/28/2023

## SUMMARY

| Project | CHAIN | METHODOLOGY |
|---|---|---|
| ChewySwap DEX | Shibarium | Manual & Automatic Analysis |

| FILES | DELIVERY | TYPE |
|---|---|---|
| Single | 08/28/2023 | Standard Audit |

| 0 | 0 | 0 | 1 | 0 | 0 |
|---|---|---|---|---|---|
| Total Findings | Critical | Major | Medium | Minor | Informational |

| | |
|---|---|
| 🟥 0 Critical | An exposure that can affect the contract functions in several events that can risk and disrupt the contract |
| 🟧 0 Major | An exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner |
| 🟧 1 Medium | An opening that could affect the outcome in executing the contract in a specific situation |
| ⬜ 0 Minor | An opening but doesn't have an impact on the functionality of the contract |
| 🟦 0 Informational | An opening that consists information but will not risk or affect the contract |

**STATUS** ✔️ **AUDIT PASSED**

# TABLE OF CONTENTS | ChewySwap DEX

# DISCLAIMER | ChewySwap DEX

**ContractWolf** audits and reports should not be considered as a form of project's "Advertisement" and does not cover any interaction and assessment from "Project Contract" to "External Contracts" such as PancakeSwap, UniSwap, SushiSwap or similar.

**ContractWolf** does not provide any warranty on its released report and should not be used as a decision to invest into audited projects.

**ContractWolf** provides a transparent report to all its "Clients" and to its "Clients Participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

**ContractWolf**'s presence is to analyze, audit and assess the Client's Smart Contract to find any underlying risk and to eliminate any logic and flow errors within its code.

*Each company or project should be liable to its security flaws and functionalities.*

# SCOPE OF WORK | ChewySwap DEX

**ChewySwap DEX** team has agreed and provided us with the files that need to be tested (*Github, BSCscan, Etherscan, Local files etc*). The scope of audit is the main contract.

The goal of this engagement is to identify if there is a possibility of security flaws in the implementation of smart contract and its systems.

ContractWolf will be focusing on contract issues and functionalities along with the project claims from smart contract to their website, whitepaper, repository which has been provided by **ChewySwap DEX**.

# AUDITING APPROACH | ChewySwap DEX

Every line of code along with its functionalities will undergo manual review to check for security issues, quality of logic and contract scope of inheritance. The manual review will be done by our team that will document any issues that they discovered.

## METHODOLOGY

The auditing process follows a routine series of steps :

1. Code review that includes the following :
   - Review of the specifications, sources and instructions provided to ContractWolf to make sure we understand the size, scope and functionality of the smart contract.
   - Manual review of code. Our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities, underlying and hidden security flaws.

2. Testing and automated analysis that includes :
   - Testing the smart contract function with common test cases and scenarios to ensure that it returns the expected results.

3. Best practices and ethical review. The team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security and control within the smart contract.

4. Recommendations to help the project take steps to eliminate or minimize threats and secure the smart contract.

# TOKEN DETAILS | ChewySwap Router

ChewySwap exchange was created to help bring together the two amazing communities of Shiba Inu and Doge

| Token Name | Symbol | Decimal | Total Supply | Chain |
|---|---|---|---|---|
| ChewySwap | CHEWY | 18 | - | Shibarium |

# SOURCE

# FINDINGS | ChewySwap DEX

| 0 | 0 | 0 | 1 | 0 | 0 |
|---|---|---|---|---|---|
| Total Findings | Critical | Major | Medium | Minor | Informational |

This report has been prepared to state the issues and vulnerabilities for ChewySwap DEX through this audit. The goal of this report findings is to identify specifically and fix any underlying issues and errors

| ID | Title | File & Line # | Severity | Status |
|---|---|---|---|---|
| SWC-102 | Outdated Compiler Version | ChewyRouter.sol | Medium | • Pending |
| SWC-102 | Outdated Compiler Version | ChewyChef.sol | Medium | • Pending |
| SWC-102 | Outdated Compiler Version | ChewyFactory.sol | Medium | • Pending |

# SWC ATTACKS | ChewySwap DEX

Smart Contract Weakness Classification and Test Cases

| ID | Description | Status |
|---|---|---|
| SWC-100 | Function Default Visibility | Passed |
| SWC-101 | Integer Overflow and Underflow | Passed |
| SWC-102 | Outdated Compiler Version | Not Passed |
| SWC-103 | Floating Pragma | Passed |
| SWC-104 | Unchecked Call Return Value | Passed |
| SWC-105 | Unprotected Ether Withdrawal | Passed |
| SWC-106 | Unprotected SELF DESTRUCT Instruction | Passed |
| SWC-107 | Reentrancy | Passed |
| SWC-108 | State Variable Default Visibility | Passed |
| SWC-109 | Uninitialized Storage Pointer | Passed |
| SWC-110 | Assert Violation | Passed |
| SWC-111 | Use of Deprecated Solidity Functions | Passed |
| SWC-112 | Delegatecall to Untrusted Callee | Passed |
| SWC-113 | DoS with Failed Call | Passed |
| SWC-114 | Transaction Order Dependence | Passed |
| SWC-115 | Authorization through tx.origin | Passed |
| SWC-116 | Block values as a proxy for time | Passed |
| SWC-117 | Signature Malleability | Passed |
| SWC-118 | Incorrect Constructor Name | Passed |
| SWC-119 | Shadowing State Variables | Passed |
| SWC-120 | Weak Sources of Randomness from Chain Attributes | Passed |
| SWC-121 | Missing Protection against Signature Replay Attacks | Passed |

| | | |
|---|---|---|
| SWC-122 | Lack of Proper Signature Verification | Passed |

| ID | Description | Status |
|---|---|---|
| SWC-123 | Requirement Violation | Passed |
| SWC-124 | Write to Arbitrary Storage Location | Passed |
| SWC-125 | Incorrect Inheritance Order | Passed |
| SWC-126 | Insufficient Gas Griefing | Passed |
| SWC-127 | Arbitrary Jump with Function Type Variable | Passed |
| SWC-128 | DoS With Block Gas Limit | Passed |
| SWC-129 | Typographical Error | Passed |
| SWC-130 | Right-To-Left-Override control character(U+202E) | Passed |
| SWC-131 | Presence of unused variables | Passed |
| SWC-132 | Unexpected Ether balance | Passed |
| SWC-133 | Hash Collisions With Multiple Variable Arguments | Passed |
| SWC-134 | Message call with hardcoded gas amount | Passed |
| SWC-135 | Code With No Effects | Passed |
| SWC-136 | Unencrypted Private Data On-Chain | Passed |

# CW ASSESSMENT | ChewySwap DEX

ContractWolf Vulnerability and Security Tests

| ID | Name | Description | Status |
|---|---|---|---|
| CW-001 | Multiple Version | Presence of multiple compiler version across all contracts | ✔ |
| CW-002 | Incorrect Access Control | Additional checks for critical logic and flow | ✔ |
| CW-003 | Payable Contract | A function to withdraw ether should exist otherwise the ether will be trapped | ✔ |
| CW-004 | Custom Modifier | major recheck for custom modifier logic | ✔ |
| CW-005 | Divide Before Multiply | Performing multiplication before division is generally better to avoid loss of precision | ✔ |
| CW-006 | Multiple Calls | Functions with multiple internal calls | ✔ |
| CW-007 | Deprecated Keywords | Use of deprecated functions/operators such as block.blockhash() for blockhash(), msg.gas for gasleft(), throw for revert(), sha3() for keccak256(), callcode() for delegatecall(), suicide() for selfdestruct(), constant for view or var for actual type name should be avoided to prevent unintended errors with newer compiler versions | ✔ |
| CW-008 | Unused Contract | Presence of an unused, unimported or uncalled contract | ✔ |
| CW-009 | Assembly Usage | Use of EVM assembly is error-prone and should be avoided or double-checked for correctness | ✔ |
| CW-010 | Similar Variable Names | Variables with similar names could be confused for each other and therefore should be avoided | ✔ |
| CW-011 | Commented Code | Removal of commented/unused code lines | ✔ |
| CW-012 | SafeMath Override | SafeMath is no longer needed starting Solidity v0.8+. The compiler now has Built in overflow checking. | ✔ |

## FIXES & RECOMMENDATION

### SWC-102 | Outdated Compiler Version

Using an outdated compiler version can be problematic especially if there are publicly disclosed bugs and issues that affect the current compiler version.

```
pragma solidity =0.5.16;
```

**Suggestion**

It is recommended to use a recent version of the Solidity compiler.

# AUDIT COMMENTS | ChewySwap DEX

Smart Contract audit comment for a non-technical perspective

**ChewyRouter**

🟢 Owner cannot renounce and transfer ownership
🟢 Owner cannot burn tokens
🟢 Owner cannot mint after initial deployment
🟢 Owner cannot set max transaction limit
🟢 Owner cannot block users

**ChewyChef**

🔴 Owner can mint tokens after initial deployment
🟢 Dev Address can change dev receiver
🟢 Fee Address can change fee receiver
🟢 Owner can transfer and renounce ownership
🟢 Owner can add/update liquidity pool
🟢 Owner can update emission rate
🟢 Owner can update start time/block for farm
🟢 Owner cannot block users
🟢 Owner cannot pause contract
🟢 Owner cannot burn

**ChewyFactory**

🟢 Factory address can initialize the contract
🟢 Contract can mint liquidity tokens
🟢 Contract can burn liquidity tokens
🟢 Contract can swap tokens
🟢 Contract can force balances of token0 and token1 to match reserves and vice versa
🟢 Contract can create pairs
🟢 Contract can change fee receiver and fee setter address
🟢 Owner cannot block users
🟢 Owner cannot pause contract
