CONTRACT WOLF

Security Assessment

Scottish Cat

Verified on 04/20/2024

SUMMARY

Project	CHAIN	METHODOLOGY
Scottish Cat	Solana	Manual & Automatic Analysis

FILES	DELIVERY	TYPE
Single	04/20/2024	Standard Audit

0	0	0	0	0	0
Total Findings	Critical	Major	Medium	Minor	Informational

🟥 0 Critical	An exposure that can affect the contract functions in several events that can risk and disrupt the contract
🟧 0 Major	An exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
🟧 0 Medium	An opening that could affect the outcome in executing the contract in a specific situation
⬜ 0 Minor	An opening but doesn't have an impact on the functionality of the contract
🟦 0 Informational	An opening that consists information but will not risk or affect the contract

STATUS ✔️ **AUDIT PASSED**

DISCLAIMER | Scottish Cat

ContractWolf audits and reports should not be considered as a form of project's "Advertisement" and does not cover any interaction and assessment from "Project Contract" to "External Contracts" such as PancakeSwap, UniSwap, SushiSwap or similar.

ContractWolf does not provide any warranty on its released report and should not be used as a decision to invest into audited projects.

ContractWolf provides a transparent report to all its "Clients" and to its "Clients Participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

ContractWolf's presence is to analyze, audit and assess the Client's Smart Contract to find any underlying risk and to eliminate any logic and flow errors within its code.

Each company or project should be liable to its security flaws and functionalities.

SCOPE OF WORK | Scottish Cat

Scottish Cat team has agreed and provided us with the files that need to be tested (*Github, BSCscan, Etherscan, Local files etc*). The scope of audit is the main contract.

The goal of this engagement is to identify if there is a possibility of security flaws in the implementation of smart contract and its systems.

ContractWolf will be focusing on contract issues and functionalities along with the project claims from smart contract to their website, whitepaper, repository which has been provided by **Scottish Cat**.

AUDITING APPROACH | Scottish Cat

Every line of code along with its functionalities will undergo manual review to check for security issues, quality of logic and contract scope of inheritance. The manual review will be done by our team that will document any issues that they discovered.

METHODOLOGY

The auditing process follows a routine series of steps :

1. Code review that includes the following :
   - Review of the specifications, sources and instructions provided to ContractWolf to make sure we understand the size, scope and functionality of the smart contract.
   - Manual review of code. Our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities, underlying and hidden security flaws.

2. Testing and automated analysis that includes :
   - Testing the smart contract function with common test cases and scenarios to ensure that it returns the expected results.

3. Best practices and ethical review. The team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security and control within the smart contract.

4. Recommendations to help the project take steps to eliminate or minimize threats and secure the smart contract.

TOKEN DETAILS | Scottish Cat

This is a sample Description, lorem ipsum dolor amet.

Token Name	Symbol	Decimal	Total Supply	Chain
Scottish Cat	$SCOT	18	10,000,000,000	Solana

FINDINGS | Scottish Cat

0	0	0	0	0	0
Total Findings	Critical	Major	Medium	Minor	Informational

This report has been prepared to state the issues and vulnerabilities for Scottish Cat through this audit. The goal of this report findings is to identify specifically and fix any underlying issues and errors

ID	Title	File & Line #	Severity	Status
N/A	No Issues found	-	-	-

CW RUST ASSESSMENT | Scottish Cat

ContractWolf Vulnerability for Rust and Security Test Cases
Relevant & known up-to-date issues for rust language

ID	Name	Description	Status
RCW-001	Reentrancy	a malicious contract calls back into the calling contract before the first invocation of the function is finished.	✔
RCW-002	Undefined behavior	The Rust reference contains a non-exhaustive list of behaviors considered undefined in Rust	✔
RCW-003	Integer overflow & underflow	Overflow/Underflow of mathematical operations inside the rust smart contract	✔
RCW-004	Out of bounds read/write	The contract or function reads data past the end or before beginning of the intended buffer	✔
RCW-005	Memory Corruption	Wrong usage of memory model throughout the contract or within its functions.	✔
RCW-006	Typographical Error	Unintended error for contract, function names, code and arithmetic inputs	✔
RCW-007	Hash Collisions With Multiple Arguments	If used incorrectly, triggers a hash collision while calling a function within a function.	✔
CVE-2021-39137	Erroneous Computation	Incorrect math calculation	✔
CVE-2022-37450	Function Manipulation	Manipulation attack of time-difference values to increase rewards	✔
CVE-2022-23328	Denial of Service	DDoS Attack using pending transactions	✔
CVE-2022-29177	High verbosity logging	The product does not properly control the allocation and maintenance of a limited resource, thereby enabling an actor to influence the amount of resources consumed, eventually leading to the exhaustion of available resources.	✔

*ContractWolf follows the safety protocols from **NVD**(National Vulnerability Database) & **CVE Details** for **RUST Language** to assess and identify the security risk for rust smart contracts.*

FIXES & RECOMMENDATION

No Issues | Clean Contract

ContractWolf did not find any technical issues within the contract and marked the contract safe to interact with.

AUDIT COMMENTS | Scottish Cat

Smart Contract audit comment for a non-technical perspective

🟢 Owner can alter the contract settings after deployment
🟢 Owner cannot freeze tokens
