

CONTRACT WOLF

Blockchain Security - Smart Contract Audits

Security Assessment

November 2, 2022

AstroX

Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

The **AstroX** agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by the **AstroX**.

Description

AstroX will be a brilliantly, fast-paced designed trading card game, with unique space-themed RPG elements that allows its players to earn by playing. AstroX will be built on the Binance Smart Chain for it's game utility and more

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- IBEP20
- IDEXFactory
- IDEXPair
- IDEXRouter
- IPrivateStakingPool
- PrivateStakingPool
- IPublicStakingPool
- PublicStakingPool
- AstroX

Description

Optimization enabled: No

Decimal: 18

Symbol: ATX

Max / Total Supply: 400,000,000,000

Capabilities

Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	3	0	6	0

Exposed Functions

Version	Public	Private	External	Internal
1.0	13	4	47	8

State Variables

Version	Total	Public
1.0	42	26

Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.17		Yes	No	No

SWC-102	Outdated Compiler Version	PASSED
SWC-101	Integer Overflow and Underflow	PASSED
SWC-100	Function Default Visibility	PASSED

AUDIT PASSED

Low Issues

State variable visibility is not set
(SWC-108)

L: 229, 239, 240, 241, 242, 243

Function Comments

Description

State variable visibility is not set (SWC-105)

Suggestion:

Variables can be specified as being public, internal, or private. Explicitly define visibility for all state variables.

Audit Comments

- CEO Address can update marketing wallet and token wallet address
- CEO Address can collect foreign tokens from contract
- CEO Address can collect BNB from contract
- CEO Address can exclude/include addresses from tax
- CEO Address can add/remove pair address
- CEO Address can airdrop tokens
- CEO Address can deposit tokens to all pools
- CEO Address can update whitelist address to all pools
- Owner cannot renounce ownership
- Owner cannot mint after initial deployment
- Owner cannot burn tokens
- Owner cannot block users
- Owner cannot pause after initial deployment
