Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

Radiant Galaxy's team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Radiant Galaxy**.

Network

Binance Smart Chain (BEP20)

Description

Radiant Galaxy is a tactical play-to-earn NFT game where players battle each other to earn money and enjoy themselves. The game modes are PVP and PVE and require strategic tactics to win the battles. With many exciting game modes, Radiant Galaxy gives everyone a chance to play and earn.

Logo

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- IERC165
- ERC165
- Strings
- IAccessControl
- EnumerableSet
- IAccessControlEnumerable
- IERC20
- IERC20Metadata
- Context
- Pausable
- AccessControl
- AccessControlEnumerable
- ERC20
- ERC20Burnable
- ERC20Pausable
- Ownable
- ERC20PresetMinterPauser
- SafeMath
- EEGToken

Description

Optimization enabled: Yes

Decimal: 18

Symbol: EEG

Max / Total supply: 1,000,000,000

Capabilities

<u>SWC-100</u>	Function Default Visibility	PASSED

AUDIT PASSED

Low Issues

A floating pragma is set (SWC-103)	L: 4	IERC165.sol ERC165.sol Strings.sol IAccessControl.sol EnumerableSet.sol IAccessControlEnumerable.sol IERC20.sol IERC20Metadata.sol Context.sol Pausable.sol AccessControl.sol AccessControlEnumerable.sol ERC20.sol ERC20Burnable.sol ERC20Pausable.sol Ownable.sol ERC20PresetMinterPauser.sol SafeMath.sol
A floating pragma is set (SWC-103)	L: 2	EEGToken.sol

Audit Comments

- Deployer can renounce ownership
- Deployer can transfer ownership
- Admin role can grant, revoke roles
- Minter role can mint after initial deployment
- Pauser role can pause/unpause contract
- Deployer cannot burn
- Deployer cannot block users
