# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

## Scope of Work

**Mofo** team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Mofo**.

# Network

Binance Smart Chain (BEP20)

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- Context
- IERC20
- SafeMath
- Address
- Ownable
- IUniswapV2Factory
- IUniswapV2Pair
- IUniswapV2Router01
- IUniswapV2Router02
- MOFOToken

## Description

Optimization enabled: Yes

Decimal: 18

Symbol: MOFO

Max / Total supply: 1,000,000,000

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	2	5	1

### Exposed Functions

Version	Public	Private	External	Internal
1.0	28	7	77	18

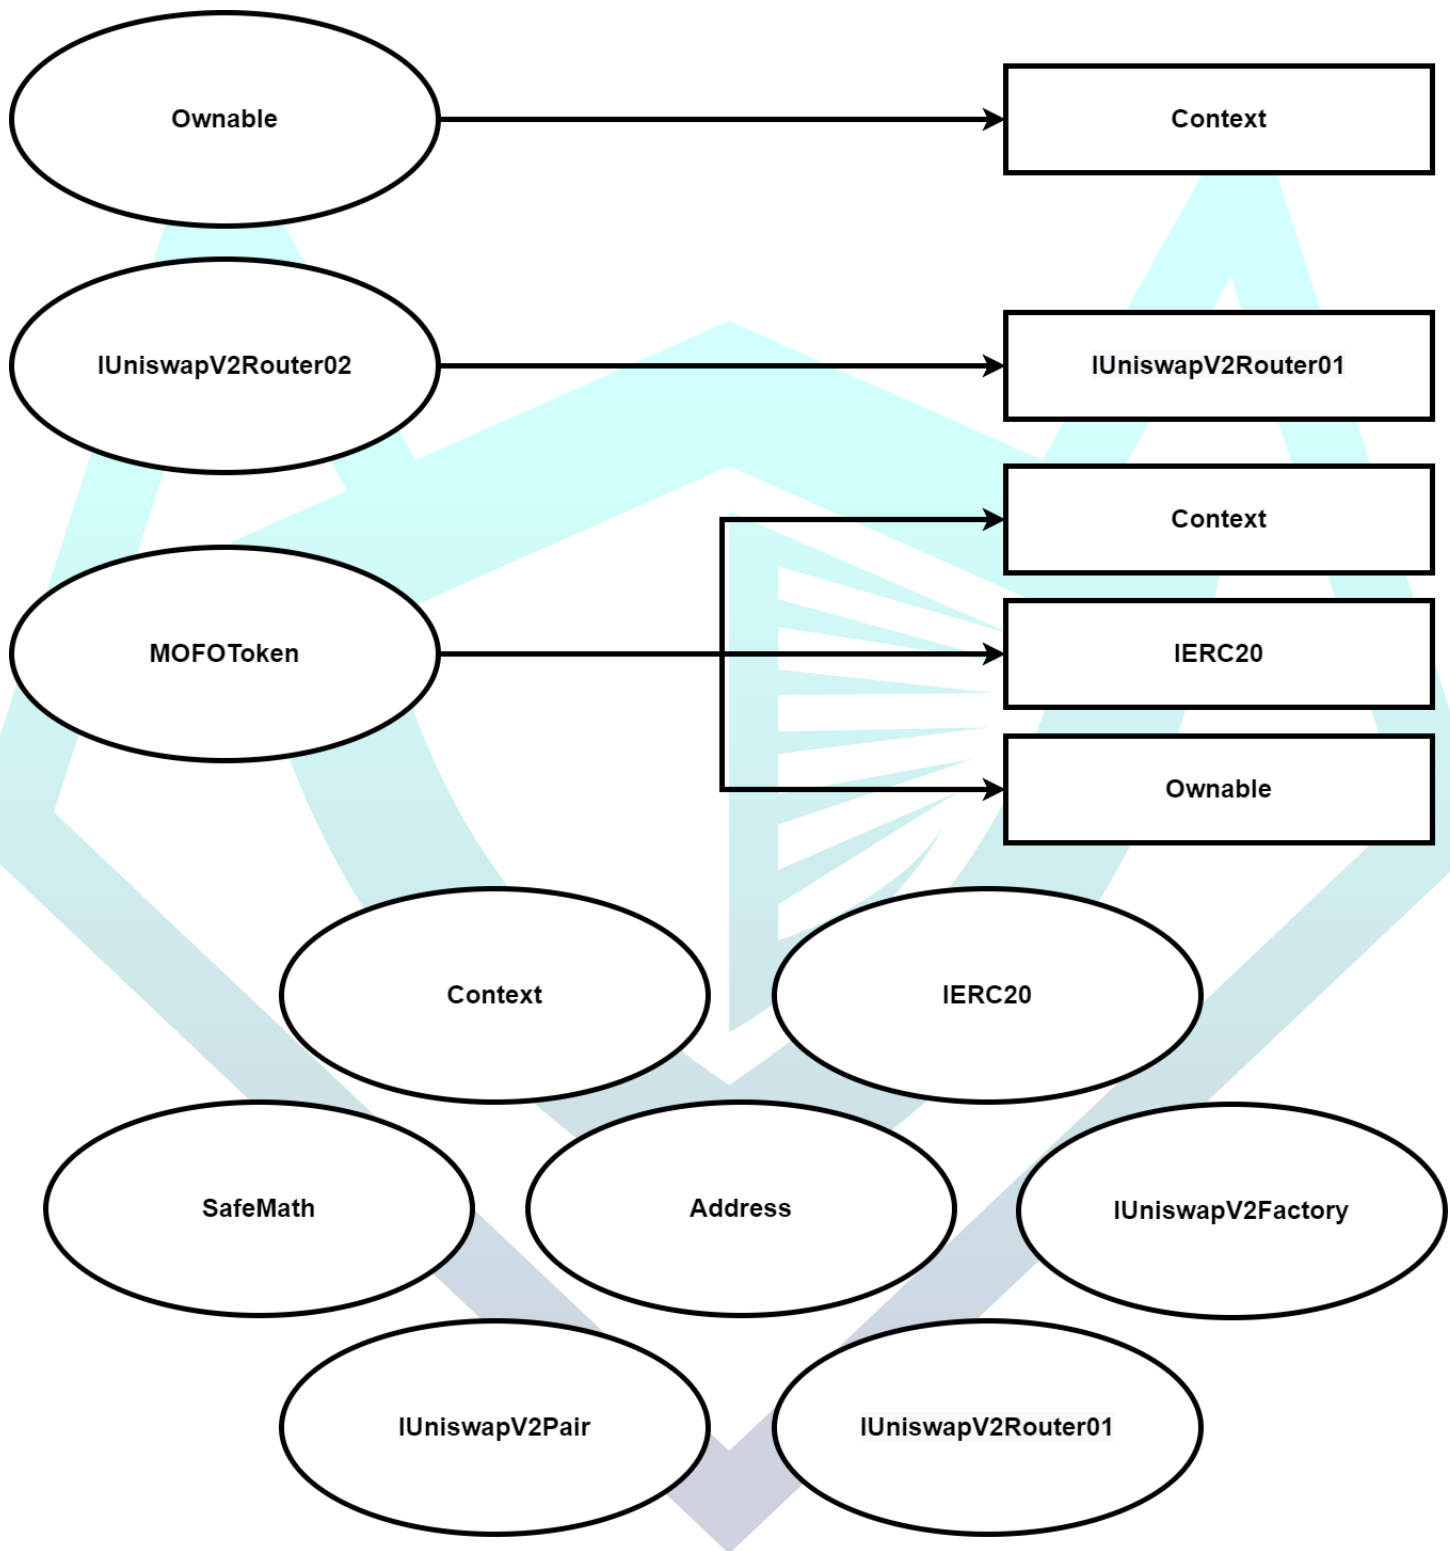

### State Variables

Version	Total	Public
1.0	38	23

### Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.4		Yes	Yes	No

# Write Functions of Contract

1. approve

2. changeRouterVersion

3. decreaseAllowance

4. enableDisableWalletLimit

5. excludeMultipleAccountsFromFees

6. increaseAllowance

7. lock

8. renounceOwnership

9. setBuyTaxes

10. setDevWalletAddress

11. setDistributionSettings

12. setIsExcludedFromFee

13. setIsNotSniper

14. setIsSniper

15. setIsTxLimitExempt

16. setIsWalletLimitExempt

17. setMarketPairStatus

18. setMarketingWalletAddress

19. setMaxTxAmount

20. setNumTokensBeforeSwap

21. setSellTaxes

22. setSwapAndLiquifyByLimitOnly

23. setSwapAndLiquifyEnabled

24. setTeamWalletAddress

25. setWalletLimit

26. transfer

27. transferFrom

28. transferOwnership

29. unlock

# AUDIT PASSED

## Low Issues

A floating pragma is set (SWC-103)	L: 7
State variable visibility is not set (SWC-108)	L: 628 C: 32, L: 663 C: 9

# Audit Comments

- Deployer can renounce ownership
- Deployer can transfer ownership
- Deployer can lock contract
- Deployer can block/unblock user
- Deployer can include/exclude addresses from fees
- Deployer can include/exclude addresses from transaction limit
- Deployer can include/exclude addresses from wallet limit
- Deployer can set buy tax not greater than 15%
- Deployer can set sell tax not greater than 25%
- Deployer can set max transaction limit
- Deployer can set wallet limit
- Deployer can enable/disable wallet limit
- Deployer can set marketing wallet address
- Deployer can set team wallet address
- Deployer can set dev wallet address
- Deployer can set minimum number of tokens for swap
- Deployer cannot burn
- Deployer cannot mint after initial deployment
