Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

Pantha Neko's team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Pantha Neko**.

Description

Meet our hero Pantha Neko like “INU” for dog in Japanese. Meet the first ever Japanese “NEKO” (猫ねこ) token, meaning cat, powered by Ethereum

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- Context
- ERC20
- IERC20
- IERC20Metadata
- IFee
- IGemAntiBot
- IUniswapV2Caller
- IUniswapV2Factory
- IUniswapV2Pair
- IUniswapV2Router01
- IUniswapV2Router02
- Ownable
- StandardTokenWithAntibot

Description

Optimization enabled: Yes

Decimal: 18

Findings

Description:

Owner can set fees up to 20%

```
function updateLiquidityFee(
    uint16 _sellLiquidityFee,
    uint16 _buyLiquidityFee
) external onlyOwner {
    require(
        _sellLiquidityFee + (sellMarketingFee) <= 200,
        "sell fee <= 20%"
    );
    require(_buyLiquidityFee + (buyMarketingFee) <= 200, "buy fee <= 20%");
    emit UpdateLiquidityFee(
        _sellLiquidityFee,
        _buyLiquidityFee,
        sellLiquidityFee,
        buyLiquidityFee
    );
    sellLiquidityFee = _sellLiquidityFee;
    buyLiquidityFee = _buyLiquidityFee;
}
```

```
function updateMarketingFee(
    uint16 _sellMarketingFee,
    uint16 _buyMarketingFee
) external onlyOwner {
    require(
        _sellMarketingFee + (sellLiquidityFee) <= 200,
        "sell fee <= 20%"
    );
    require(_buyMarketingFee + (buyLiquidityFee) <= 200, "buy fee <= 20%");
    emit UpdateMarketingFee(
        _sellMarketingFee,
        _buyMarketingFee,
        sellMarketingFee,
        buyMarketingFee
    );
    sellMarketingFee = _sellMarketingFee;
    buyMarketingFee = _buyMarketingFee;
}
```

Description:

Owner can set max wallet and transaction limit greater than 0

```
function updateMaxWallet(uint256 _maxWallet) external onlyOwner {  
    require(_maxWallet>0, "maxWallet > 0");  
    emit UpdateMaxWallet(_maxWallet, maxWallet);  
    maxWallet = _maxWallet;  
}
```

```
function updateMaxTransactionAmount(uint256 _maxTransactionAmount)  
    external  
    onlyOwner  
{  
    require(_maxTransactionAmount>0, "maxTransactionAmount > 0");  
    emit UpdateMaxTransactionAmount(_maxTransactionAmount, maxTransactionAmount);  
    maxTransactionAmount = _maxTransactionAmount;  
}
```

Function Comments

- Owner can renounce ownership
- Owner can transfer ownership
- Owner can enable/disable anti-bot
- Owner can update uniswap pair and router address
- Owner can set max wallet and transaction limit greater than 0
- Owner can set liquidity/marketing fee up to 20%
- Owner can update marketing wallet address
- Owner can update minimum amount to take fee greater than 0
- Owner can toggle and set automated market maker pair address
- Owner can include/exclude address from fees
- Owner can include/exclude address from max transaction limit
- Owner cannot block user address
- Owner cannot burn tokens
- Owner cannot mint after initial deployment
- Owner cannot pause contract
