

# CONTRACT WOLF

**Blockchain Security - Smart Contract Audits**

## Security Assessment

March 10, 2022

# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

# Network

Binance Smart Chain (BEP20)

## Website

<https://secrecy.dog/>

## Twitter

<https://twitter.com/SecrecyDog>

## Telegram

[https://t.me/secrecy\\_dog](https://t.me/secrecy_dog)

## Description

SecrecyDog Protocol is a powerful coin mixing proposal based on WEB 3.0 privacy anonymous cryptographic algorithm, which supports coin mixing privacy transfers, allowing on-chain asset transfers to be equally private and untraceable.

## ContractWolf Engagement

10<sup>th</sup> of March 2022, **SecrecyDog** engaged and agrees to audit their smart contract's code by ContractWolf. The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **SecrecyDog**.

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

| Level                | Value     | Vulnerability   |
|----------------------|-----------|---|
| <b>Critical</b>      | 9 - 10    | An exposure that can affect the contract functions in several events that can risk and disrupt the contract                                     |
| <b>High</b>          | 7 - 8.9   | An exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner |
| <b>Medium</b>        | 4 - 6.9   | An opening that could affect the outcome in executing the contract in a specific situation  |
| <b>Low</b>           | 0.1 - 3.9 | An opening but doesn't have an impact on the functionality of the contract  |
| <b>Informational</b> | 0         | An opening that consists of information's but will not risk or affect the contract  |

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- Context
- IERC20
- SafeMath
- ERC20
- Ownable

# Description

Optimization enabled: Yes

Version: v0.6.12

Decimal: 18

Symbol: \$SecrecyDog

## Capabilities

### Components

| Version | Contracts | Libraries | Interfaces | Abstract |
|---------|-----------|-----------|------------|----------|
| 1.0     | 3         | 1         | 1          | 1        |

### Exposed Functions

| Version | Public | Private |
|---------|--------|---------|
| 1.0     | 18     | 0       |

| Version | External | Internal |
|---------|----------|----------|
| 1.0     | 8        | 17       |

### State Variables

| Version | Total | Public |
|---------|-------|--------|
| 1.0     | 10    | 3      |

## Capabilities

| Version | Solidity Versions Observed | Experimental Features | Can Receive Funds | Uses Assembly | Has Destroyable Contracts |
|---------|----------------------------|-----------------------|-------------------|---------------|---------------------------|
| 1.0     | ^0.6.0                     |                       | Yes               | No            | No                        |

# Scope of Work

**SecrecyDog's** team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

# Inheritance Graph

# Verify Claims

## Correct implementation of Token Standard

| Tested | Verified |
|--------|----------|
| ✓      | ✗        |

| Function     | Description  | Exist | Tested | Verified |
|--------------|--|-------|--------|----------|
| TotalSupply  | Information about the total coin or token supply   | ✓     | ✓      | ✓        |
| BalanceOf    | Details on the account balance from a specified address                                    | ✓     | ✓      | ✓        |
| Transfer     | An action that transfers a specified amount of coin or token to a specified address        | ✓     | ✓      | ✓        |
| TransferFrom | An action that transfers a specified amount of coin or token from a specified address      | ✓     | ✓      | ✓        |
| Approve      | Provides permission to withdraw specified number of coin or token from a specified address | ✓     | ✓      | ✓        |

## Optional implementation

| Function          | Description                             | Exist | Tested | Verified |
|-------------------|---|-------|--------|----------|
| renounceOwnership | Owner renounce ownership for more trust | ✓     | ✓      | ✓        |

## Deployer cannot mint any new tokens after deployment

| Statement                   | Exist | Tested | Verified | File |
|-----------------------------|-------|--------|----------|------|
| Deployer can't mint         | ✓     | ✓      | ✓        | Main |
| Deployer can't generate NFT | ✓     | ✓      | ✓        | Main |

Max / Total supply: 325,000

## Deployer cannot burn or lock user funds

| Statement            | Exist | Tested | Verified |
|----------------------|-------|--------|----------|
| Deployer cannot lock | ✓     | ✓      | ✓        |
| Deployer cannot burn | ✓     | ✓      | ✓        |

## Deployer cannot pause contract

| Statement             | Exist | Tested | Verified |
|-----------------------|-------|--------|----------|
| Deployer cannot pause | ✓     | ✓      | ✓        |

# Overall Checkup (Smart Contract Security)
