# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

## Scope of Work

The **Safutrendz** agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by the **Safutrendz**.

## Description

SaFuTrendz is a decentralized ecosystem that enables DEFI investors to gain access to unique projects & utilities.

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- Context
- IUniswapV2Pair
- IUniswapV2Factory
- IERC20
- IERC20Metadata
- ERC20
- SafeMath
- Ownable
- SafeMathInt
- SafeMathUint
- IUniswapV2Router01
- IUniswapV2Router02
- SaFuTrendz

## Description

Optimization enabled: Yes

Decimal: 18

Symbol: STZ

Max / Total Supply: 1,000,000,000

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	3	3	6	1

### Exposed Functions

Version	Public	Private	External	Internal
1.0	21	4	89	23

### State Variables

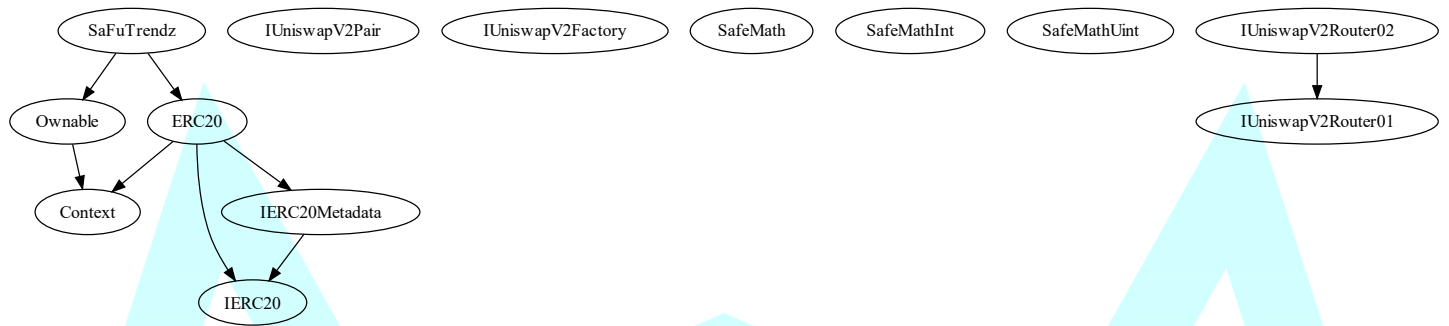

Version	Total	Public
1.0	54	45

### Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.17		Yes	No	No

# Write Functions of Contract

# Call Graph

# SWC Attacks

ID	Title	Status
<a href="#">SWC-136</a>	Unencrypted Private Data On-Chain	PASSED
<a href="#">SWC-135</a>	Code With No Effects	PASSED
<a href="#">SWC-134</a>	Message call with hardcoded gas amount	PASSED
<a href="#">SWC-133</a>	Hash Collisions with Multiple Variable Length Arguments	PASSED
<a href="#">SWC-132</a>	Unexpected Ether balance	PASSED
<a href="#">SWC-131</a>	Presence of unused variables	PASSED
<a href="#">SWC-130</a>	Right-To Left Override control character (U+202E)	PASSED
<a href="#">SWC-129</a>	Typographical Error	PASSED
<a href="#">SWC-128</a>	DoS With Block Gas Limit	PASSED
<a href="#">SWC-127</a>	Arbitrary Jump with Function Type Variable	PASSED
<a href="#">SWC-126</a>	Insufficient Gas Griefing	PASSED
<a href="#">SWC-125</a>	Incorrect Inheritance Order	PASSED
<a href="#">SWC-124</a>	Write to Arbitrary Storage Location	PASSED
<a href="#">SWC-123</a>	Requirement Violation	PASSED
<a href="#">SWC-122</a>	Lack of Proper Signature Verification	PASSED
<a href="#">SWC-121</a>	Missing Protection against Signature Replay Attacks	PASSED
<a href="#">SWC-120</a>	Weak Sources of Randomness from Chain Attributes	LOW ISSUE
<a href="#">SWC-119</a>	Shadowing State Variables	PASSED
<a href="#">SWC-118</a>	Incorrect Constructor Name	PASSED
<a href="#">SWC-117</a>	Signature Malleability	PASSED
<a href="#">SWC-116</a>	Block values as a proxy for time	PASSED
<a href="#">SWC-115</a>	Authorization through tx.origin	LOW ISSUE
<a href="#">SWC-114</a>	Transaction Order Dependence	PASSED
<a href="#">SWC-113</a>	DoS with Failed Call	PASSED
<a href="#">SWC-112</a>	Delegate call to Untrusted Callee	PASSED
<a href="#">SWC-111</a>	Use of Deprecated Solidity Functions	PASSED

<a href="#"><u>SWC-110</u></a>	Assert Violation	<b>PASSED</b>
<a href="#"><u>SWC-109</u></a>	Uninitialized Storage Pointer	<b>PASSED</b>
<a href="#"><u>SWC-108</u></a>	State Variable Default Visibility	<b>PASSED</b>
<a href="#"><u>SWC-107</u></a>	Reentrancy	<b>PASSED</b>
<a href="#"><u>SWC-106</u></a>	Unprotected SELFDESTRUCT Instruction	<b>PASSED</b>
<a href="#"><u>SWC-105</u></a>	Unprotected Ether Withdrawal	<b>PASSED</b>
<a href="#"><u>SWC-104</u></a>	Unchecked Call Return Value	<b>PASSED</b>
<a href="#"><u>SWC-103</u></a>	Floating Pragma	<b>LOW ISSUE</b>
<a href="#"><u>SWC-102</u></a>	Outdated Compiler Version	<b>PASSED</b>
<a href="#"><u>SWC-101</u></a>	Integer Overflow and Underflow	<b>PASSED</b>
<a href="#"><u>SWC-100</u></a>	Function Default Visibility	<b>PASSED</b>

# AUDIT PASSED

## Low Issues

A floating pragma is set (SWC-103)	L: 38
Use of “tx.origin” as a part of authorization control (SWC-115)	L: 1137, 1138
Potential use of “block.number” as source of randomness (SWC-120)	L: 969, 1137, 1138, 1164

# Function Comments

## Description

A floating pragma is set (SWC-103)

## Suggestion:

Specific version to ensure that the bytecode produced does not vary between builds.

---

## Description

Potential use of “block.number” as source of randomness (SWC-120)

## Suggestion:

- Using commitment scheme, e.g. RANDAO.
  - Using external sources of randomness via oracles, e.g. Oraclize. Note that this approach requires trusting in oracle, thus it may be reasonable to use multiple oracles.
  - Using of Bitcoin block hashes, as they are more expensive to mine.
- 

## Description

Use of “tx.origin” as a part of authorization control (SWC-115)

## Suggestion:

tx.origin should not be used for authorization. Use msg.sender instead.

# Audit Comments

- Owner can renounce ownership
- Owner can transfer ownership
- Owner can toggle trading
- Owner can toggle limit in trading
- Owner can toggle trading between delays
- Owner can toggle early sell tax
- Owner can update minimum amount for swap tokens between 1 and 200,000,000
- Owner can update max transaction with an indefinite amount
- Owner can update max wallet with an indefinite amount
- Owner can exclude/include addresses from max transaction
- Owner can exclude/include addresses from max wallet
- Owner can update total buy fees with an indefinite amount
- Owner can update total sell fees with an indefinite amount
- Owner can update total early sell fees with an indefinite amount
- Owner can exclude/include addresses from fees
- Owner can block/unblock users
- Owner can update automated market maker pair address
- Owner can change marketing wallet address
- Owner can change salary wallet address
- Owner can change vault wallet address
- Owner can change dev wallet address
- Owner can airdrop
- Owner can withdraw ETH
- Owner can collect tokens from contract
- Owner cannot mint after initial deployment
- Owner cannot burn
- Owner cannot pause contract
