# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

## Scope of Work

**Gempad's** team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Gempad**.

## Description

Gempad's Dividend Tokens has max wallet, max transaction, marketing, liquidity, reward fees. Fees combined can't be more than 30% and has a setting for minimum tokens to hold to get rewards.

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- AddressUpgradeable
- Initializable
- ContextUpgradeable
- IERC20Upgradeable
- IERC20MetadataUpgradeable
- IterableMapping
- SafeMathUint
- SafeMathInt
- SafeMath
- IUniswapV2Pair
- OwnableUpgradeable
- ERC20Upgradeable
- Context
- IERC20
- IERC20Metadata
- IUniswapRouter01
- IUniswapRouter02
- IUniswapV2Factory

- DividendPayingToken
- DividendTokenDividendTracker
- IPancakeCaller
- DividendToken

## Description

Optimization enabled: Yes

Decimal: 18

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	5	6	11	5

### Exposed Functions

Version	Public	Private	External	Internal
1.0	58	9	113	67

### State Variables

Version	Total	Public
1.0	49	24

### Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.13		Yes	Yes	No

# Write Functions of Contract

1. approve

2. claim

3. decreaseAllowance

4. excludeFromDividends

5. excludeFromFees

6. excludeFromMaxTransactionAmount

7. increaseAllowance

8. processDividendTracker

9. renounceOwnership

10. setAutomatedMarketMakerPair

11. setMarketingWallet

12. setSwapTokensAtAmount

13. transfer

14. transferFrom

15. transferOwnership

16. updateClaimWait

17. updateDividendTracker

18. updateGasForProcessing

19. updateLPWallet

20. updateLiquidityFee

21. updateMarketingFee

22. updateMaxTransactionAmount

23. updateMaxWallet

24. updateMinimumTokenBalanceForDividends

25. updateRewardFee

26. updateUniswapV2Pair

27. updateUniswapV2Router

<a href="#"><u>SWC-100</u></a>	Function Default Visibility	<b>PASSED</b>

# AUDIT PASSED

## Low Issues

A floating pragma is set (SWC-103)	L: 2	DividendToken.sol IUniswapV2Factory.sol IUniswapV2Router02.sol DividendTokenDividendTracker.sol IUniswapV2Pair.sol SafeMathInt.sol SafeMathUint.sol IterableMapping.sol
A floating pragma is set (SWC-103)	L: 4	ERC20.sol Ownable.sol Clones.sol IERC20.sol IERC20Metadata.sol Context.sol ERC20Upgradeable.sol OwnableUpgradeable.sol SafeMath.sol IERC20Upgradeable.sol IERC20MetadataUpgradeable.sol ContextUpgradeable.sol Initializable.sol AddressUpgradeable.sol

State variable visibility is not set (SWC-108)	L: 24	DividendToken.sol
Use of “tx.origin” as a part of authorization control (SWC-115)	L: 475, 576	DividendToken.sol

# Audit Comments

- Deployer can renounce ownership
- Deployer can transfer ownership
- Deployer can exclude addresses from dividends
- Deployer can update minimum token balance for dividends amount
- Deployer can update swap tokens at amount
- Deployer can change dividend tracker address
- Deployer can change UniswapV2RouterPair address
- Deployer can change UniswapV2Router address
- Deployer can update max wallet amount
- Deployer can update max transaction amount
- Deployer can exclude/include addresses from fees
- Deployer can change marketing wallet address
- Deployer can change liquidity pool address
- Deployer can change total sell fee not greater than 30%
- Deployer can change total buy fee not greater than 30%
- Deployer can change automated market maker pair address
- Deployer can exclude/include addresses from max transaction amount
- Deployer can update gas for processing between 200,000 and 500,000
- Deployer can update claim wait time
- Deployer cannot mint after initial deployment
- Deployer cannot burn
- Deployer cannot block users
- Deployer cannot pause contract
