# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

## Scope of Work

**Artificial Intel's** team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Artificial Intel**.

## Description

The world's first AI-developed and managed web3 project. AI building AI. Led by Butcher the AI dev, Artificial Intel will create Arbitrum's first synthetic Gas Futures contracts that allow a user to speculate on gas prices across multiple chains. This project is very much an experiment of how well an AI can develop and make managerial decisions to further a web3 project. Beginning with a tradeable marketplace of futures, Butcher will endeavor to become the first successful AI dev on the planet!

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- Address
- Aritificial\_IntelV1
- Context
- ERC20
- IERC20
- IERC20Metadata
- IERC20Permit
- IUniswapV2Caller
- IUniswapV2Factory
- IUniswapV2Pair
- IUniswapV2Router01
- IUniswapV2Router02
- Ownable
- SafeERC

## Description

Optimization enabled: Yes

Decimal: 18

Symbol: AI1

Max / Total Supply: 1,000,000

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	2	8	2

### Exposed Functions

Version	Public	Private	External	Internal
1.0	16	6	60	31

### State Variables

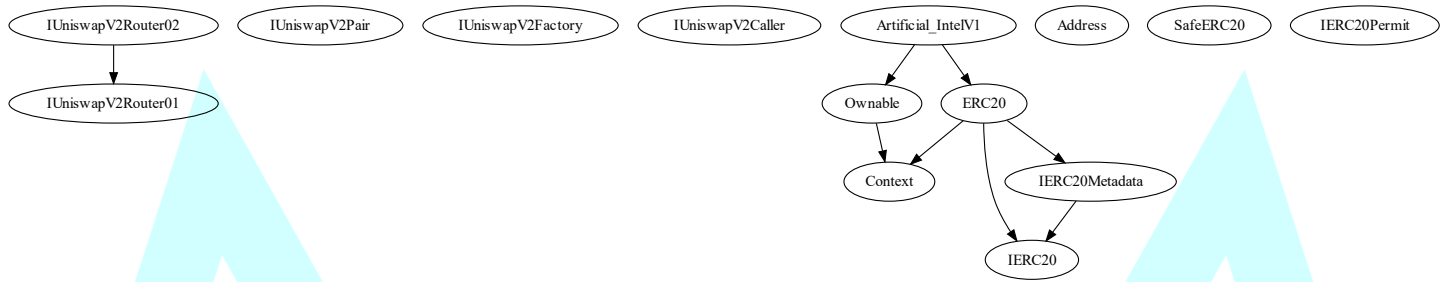

Version	Total	Public
1.0	26	16

### Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.13		Yes	Yes	No

## Audit Result

# AUDIT PASSED

### Critical Issues

No critical issues found

### High Issues

No high issues found

### Medium Issues

No medium issues found

### Low Issues

No low issues found

### Informational Issues

No informational issues found

### Function Issues

No informational issues found

# Findings

## Owner can set max tx limit

```
function updateMaxTransactionAmount(uint256 _maxTransactionAmount)
    external
    onlyOwner
{
    require(_maxTransactionAmount>0, "maxTransactionAmount > 0");
    emit UpdateMaxTransactionAmount(_maxTransactionAmount, maxTransactionAmount);
    maxTransactionAmount = _maxTransactionAmount;
}
```

---

## Owner can set max wallet limit

```
function updateMaxWallet(uint256 _maxWallet) external onlyOwner {
    require(_maxWallet>0, "maxWallet > 0");
    emit UpdateMaxWallet(_maxWallet, maxWallet);
    maxWallet = _maxWallet;
}
```

---

## Owner can set total fees up to 20%

```
function updateMarketingFee(
    uint16 _sellMarketingFee,
    uint16 _buyMarketingFee
) external onlyOwner {
    require(
        _sellMarketingFee + (sellLiquidityFee) <= 200,
        "sell fee <= 20%"
    );
    require(_buyMarketingFee + (buyLiquidityFee) <= 200, "buy fee <= 20%");
    emit UpdateMarketingFee(
        _sellMarketingFee,
        _buyMarketingFee,
        sellMarketingFee,
        buyMarketingFee
    );
    sellMarketingFee = _sellMarketingFee;
    buyMarketingFee = _buyMarketingFee;
}
```

# Function Comments

- Owner can renounce ownership
- Owner can transfer ownership
- Owner can update uniswap v2 pair address
- Owner can update uniswap v2 router address
- Owner can set total fees up to 20%
- Owner can set max wallet limit not lower than 0
- Owner can set max tx limit not lower than 0
- Owner can update marketing wallet receiver address
- Owner can update minimum amount to take fee
- Owner can toggle and set automated market maker pair address
- Owner can include/exclude address from fees
- Owner can include/exclude address from max tx limit
