Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

Meta Floki Bonk team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Meta Floki Bonk**.

Description

4% tax 2% auto-lp 2% reflections. Community token with a renounced contract.

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

| Level | Value | Vulnerability |
|---------------|-----------|---|
| Critical | 9 - 10 | An Exposure that can affect the contract functions in several events that can risk and disrupt the contract |
| High | 7 - 8.9 | An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner |
| Medium | 4 - 6.9 | An opening that could affect the outcome in executing the contract in a specific situation |
| Low | 0.1 - 3.9 | An opening but doesn't have an impact on the functionality of the contract |
| Informational | 0 | An opening that consists of information's but will not risk or affect the contract |

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- Context
- IUniswapV2Factory
- IUniswapV2Pair
- IUniswapV2Router01
- IUniswapV2Router02
- IERC20
- Address
- SafeMath
- Ownable
- MetaFlokiBonk

Description

Optimization enabled: Yes

Decimal: 18

Symbol: MFB

Max / Total supply: 1,000,000,000,000,000

Capabilities

Components

| Version | Contracts | Libraries | Interfaces | Abstract |
|---------|-----------|-----------|------------|----------|
| 1.0 | 2 | 2 | 5 | 1 |

Exposed Functions

| Version | Public | Private | External | Internal |
|---------|--------|---------|----------|----------|
| 1.0 | 27 | 22 | 70 | 16 |

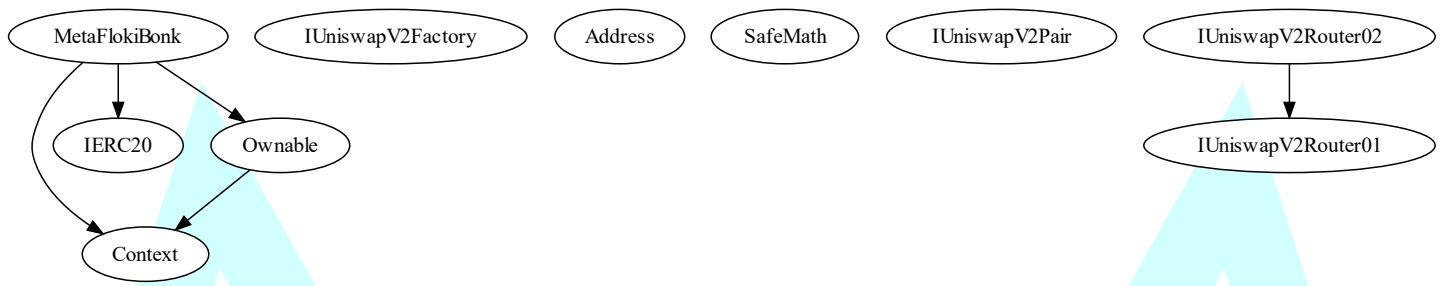

State Variables

| Version | Total | Public |
|---------|-------|--------|
| 1.0 | 26 | 6 |

Capabilities

| Version | Solidity Versions Observed | Experimental Features | Can Receive Funds | Uses Assembly | Has Destroyable Contracts |
|---------|----------------------------|-----------------------|-------------------|---------------|---------------------------|
| 1.0 | v0.6.12 | | Yes | Yes | No |

Write Functions of Contract

1. approve

2. decreaseAllowance

3. deliver

4. excludeFromFee

5. excludeFromReward

6. includeInFee

7. includeInReward

8. increaseAllowance

9. lock

10. renounceOwnership

11. setLiquidityFeePercent

12. setMaxTxPercent

13. setSwapAndLiquifyEnabled

14. setTaxFeePercent

15. transfer

16. transferFrom

17. transferOwnership

18. unlock

Call Graph

SWC Attacks

| ID | Title | Status |
|-------------------------|---|--------|
| SWC-136 | Unencrypted Private Data On-Chain | PASSED |
| SWC-135 | Code With No Effects | PASSED |
| SWC-134 | Message call with hardcoded gas amount | PASSED |
| SWC-133 | Hash Collisions with Multiple Variable Length Arguments | PASSED |
| SWC-132 | Unexpected Ether balance | PASSED |
| SWC-131 | Presence of unused variables | PASSED |
| SWC-130 | Right-To Left Override control character (U+202E) | PASSED |
| SWC-129 | Typographical Error | PASSED |
| SWC-128 | DoS With Block Gas Limit | PASSED |
| SWC-127 | Arbitrary Jump with Function Type Variable | PASSED |
| SWC-126 | Insufficient Gas Griefing | PASSED |
| SWC-125 | Incorrect Inheritance Order | PASSED |
| SWC-124 | Write to Arbitrary Storage Location | PASSED |
| SWC-123 | Requirement Violation | PASSED |
| SWC-122 | Lack of Proper Signature Verification | PASSED |
| SWC-121 | Missing Protection against Signature Replay Attacks | PASSED |
| SWC-120 | Weak Sources of Randomness from Chain Attributes | PASSED |
| SWC-119 | Shadowing State Variables | PASSED |
| SWC-118 | Incorrect Constructor Name | PASSED |
| SWC-117 | Signature Malleability | PASSED |
| SWC-116 | Block values as a proxy for time | PASSED |
| SWC-115 | Authorization through tx.origin | PASSED |
| SWC-114 | Transaction Order Dependence | PASSED |
| SWC-113 | DoS with Failed Call | PASSED |
| SWC-112 | Delegate call to Untrusted Callee | PASSED |
| SWC-111 | Use of Deprecated Solidity Functions | PASSED |

| | | |
|--------------------------------|--------------------------------------|-----------|
| <u>SWC-110</u> | Assert Violation | PASSED |
| <u>SWC-109</u> | Uninitialized Storage Pointer | PASSED |
| <u>SWC-108</u> | State Variable Default Visibility | LOW ISSUE |
| <u>SWC-107</u> | Reentrancy | PASSED |
| <u>SWC-106</u> | Unprotected SELFDESTRUCT Instruction | PASSED |
| <u>SWC-105</u> | Unprotected Ether Withdrawal | PASSED |
| <u>SWC-104</u> | Unchecked Call Return Value | PASSED |
| <u>SWC-103</u> | Floating Pragma | LOW ISSUE |
| <u>SWC-102</u> | Outdated Compiler Version | PASSED |
| <u>SWC-101</u> | Integer Overflow and Underflow | PASSED |
| <u>SWC-100</u> | Function Default Visibility | PASSED |

AUDIT PASSED

Low Issues

| | |
|--|--------|
| A floating pragma is set (SWC-103) | L: 32 |
| State variable visibility is not set (SWC-108) | L: 723 |

Function Comments

Description:

A floating pragma is set (SWC-103)

```
pragma solidity ^0.8.0;
```

Suggestion:

Specific version to ensure that the bytecode does not vary between builds.

```
pragma solidity 0.8.0;
```

Description:

State variable visibility is not set (SWC-108)

```
bool inSwapAndLiquify;
```

Suggestion:

Specify variables as **public**, **internal**, or **private**.

Audit Comments

- Contract's ownership has been renounced
- Current tax fee = 2%
- Owner can set max tx percent up to 100%
- Owner can lock/unlock contract
- Owner can renounce ownership
- Owner can transfer ownership
- Owner can include/exclude addresses from rewards
- Owner can include/exclude addresses from fees
- Owner can toggle swap and liquify status
- Owner cannot burn tokens
- Owner cannot block user
- Owner cannot mint after initial deployment
