# Disclaimer

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

**ContractWolf** does not provide any warranty on its released reports.

**ContractWolf** should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

**ContractWolf** provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

## Scope of Work

**GemNodes** team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **GemNodes**.

# Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

# Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

## Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

# Used Code from other Frameworks/Smart Contracts (Direct Imports)

## Imported Packages

- IERC20
- IERC20Metadata
- Context
- console
- ERC20
- Ownable
- Address
- SafeERC20
- PaymentSplitter
- SafeMath
- IJoeRouter01
- IJoeRouter02
- IJoeFactory
- IterableNodeTypeMapping
- NODERewardManager
- GemNodesV2

# Description

Optimization enabled: Yes

Decimal: 18

Symbol: GEM

Max / Total supply: 500,000

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	4	5	5	2

### Exposed Functions

Version	Public	Private	External	Internal
1.0	53	16	69	418

### State Variables

Version	Total	Public
1.0	46	27

### Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.2		Yes	Yes	No

# Write Functions of Contract

1. approve

2. blacklistMalicious

3. boostReward

4. changeSwapLiquify

5. decreaseAllowance

6. increaseAllowance

7. increaseLiquidityDistribution

8. openTrading

9. release

10. release

11. renounceOwnership

12. setAutomatedMarketMakerPair

13. setIsSuper

14. setNodeManagement

15. transfer

16. transferFrom

17. transferOwnership

18. updateCashoutFee

19. updateLiquiditFee

20. updateMaxTx

21. updateRewardsFee

22. updateRewardsWall

23. updateRwSwapFee

24. updateSwapTokensAmount

25. updateTreasuryFee

26. updateTreasuryWall

27. updateUniswapV2Router

# Call Graph

# SWC Attacks

ID	Title	Status
<a href="#">SWC-136</a>	Unencrypted Private Data On-Chain	PASSED
<a href="#">SWC-135</a>	Code With No Effects	PASSED
<a href="#">SWC-134</a>	Message call with hardcoded gas amount	PASSED
<a href="#">SWC-133</a>	Hash Collisions with Multiple Variable Length Arguments	PASSED
<a href="#">SWC-132</a>	Unexpected Ether balance	PASSED
<a href="#">SWC-131</a>	Presence of unused variables	PASSED
<a href="#">SWC-130</a>	Right-To Left Override control character (U+202E)	PASSED
<a href="#">SWC-129</a>	Typographical Error	PASSED
<a href="#">SWC-128</a>	DoS With Block Gas Limit	PASSED
<a href="#">SWC-127</a>	Arbitrary Jump with Function Type Variable	PASSED
<a href="#">SWC-126</a>	Insufficient Gas Griefing	PASSED
<a href="#">SWC-125</a>	Incorrect Inheritance Order	PASSED
<a href="#">SWC-124</a>	Write to Arbitrary Storage Location	PASSED
<a href="#">SWC-123</a>	Requirement Violation	PASSED
<a href="#">SWC-122</a>	Lack of Proper Signature Verification	PASSED
<a href="#">SWC-121</a>	Missing Protection against Signature Replay Attacks	PASSED
<a href="#">SWC-120</a>	Weak Sources of Randomness from Chain Attributes	PASSED
<a href="#">SWC-119</a>	Shadowing State Variables	PASSED
<a href="#">SWC-118</a>	Incorrect Constructor Name	PASSED
<a href="#">SWC-117</a>	Signature Malleability	PASSED
<a href="#">SWC-116</a>	Block values as a proxy for time	PASSED
<a href="#">SWC-115</a>	Authorization through tx.origin	PASSED
<a href="#">SWC-114</a>	Transaction Order Dependence	PASSED
<a href="#">SWC-113</a>	DoS with Failed Call	PASSED
<a href="#">SWC-112</a>	Delegate call to Untrusted Callee	PASSED
<a href="#">SWC-111</a>	Use of Deprecated Solidity Functions	PASSED

<a href="#"><u>SWC-110</u></a>	Assert Violation	<b>PASSED</b>
<a href="#"><u>SWC-109</u></a>	Uninitialized Storage Pointer	<b>NOT PASSED</b>
<a href="#"><u>SWC-108</u></a>	State Variable Default Visibility	<b>PASSED</b>
<a href="#"><u>SWC-107</u></a>	Reentrancy	<b>PASSED</b>
<a href="#"><u>SWC-106</u></a>	Unprotected SELFDESTRUCT Instruction	<b>PASSED</b>
<a href="#"><u>SWC-105</u></a>	Unprotected Ether Withdrawal	<b>PASSED</b>

<a href="#"><u>SWC-102</u></a>	Outdated Compiler Version	<b>PASSED</b>
<a href="#"><u>SWC-101</u></a>	Integer Overflow and Underflow	<b>PASSED</b>
<a href="#"><u>SWC-100</u></a>	Function Default Visibility	<b>PASSED</b>

# AUDIT PASSED

## Low Issues

A floating pragma is set (SWC-103)

L: 12, L: 95, L: 122, L: 147,  
L: 1682, L: 2050, L: 2125, L: 2343,  
L: 2441, L: 2629, L: 2857, L: 3015,  
L: 3067, L: 3096, L: 3197, L: 3819

## Medium Issues

Dangerous use of uninitialized  
storage variables (SWC-109)

L: 3462 C: 2, L: 3558 C: 3

# Audit Comments

- Deployer can renounce ownership
- Deployer can transfer ownership
- Deployer can increase liquidity distribution
- Deployer can set node reward manager address
- Deployer can update UniswapV2Router
- Deployer can update treasury wall
- Deployer can update rewards wall
- Deployer can update fees up to 100%
- Deployer can set automated market maker pair address
- Deployer can block/unblock user
- Deployer can change swap liquify
- Deployer can open trading
- Deployer can update max transaction limit with an indefinite amount
- Deployer can set super address
- Deployer cannot burn
- Deployer cannot pause contract
- Deployer cannot mint after initial deployment
- Sentry can add node type
- Sentry can change node type
- Sentry can set default node type name
- Sentry can set token address
- Sentry can update UniswapV2Router address
- Sentry can update swap tokens amount
- Sentry can update treasury wall
- Sentry can update rewards wall

- Sentry can update fees up to 100%
- Sentry can update gate keeper address
- Sentry can toggle update open create
- Sentry can toggle update open level up
