Audit Result	16
Audit Comments	17

#### **Disclaimer**

**ContractWolf.io** audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

**ContractWolf** should not be used as a <u>decision</u> to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's SMART CONTRACT.

**ContractWolf** presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

#### Scope of Work

**Dad Bods'** team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

**ContractWolf** will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Dad Bods**.

#### **Description**

Dad Bods Token was created in the beginning of 2022, by dads, for everybody (not just dads). We wanted to create a token that would be perfect for beginners who have never tried out crypto currency, all the way to professionals who have been in the market for years. Cryptocurrency can be intimidating and our whole team understands that and wants to help. Dad Bods Token has a dream of creating and selling merchandise, having valuable NFTs created by our amazing artists, and further down the line teaming up with a microbrewery to have our own brand of beer. We plan to have several different staking pools because we believe in this project being a long-term investment instead of a pump and dump.

#### **Risk Level Classification**

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

#### **Auditing Approach**

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

#### Methodology

The auditing process follows a routine series of steps:

- 1. Code review that includes the following:
  - Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
  - Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.
- 2. Testing and automated analysis that includes:
  - Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.
- 3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.
- 4. Recommendations to help the project take steps to secure the smart contract.

# **Used Code from other Frameworks/Smart Contracts (Direct Imports)**

#### Imported Packages

- Context
- IERC20
- IERC20Metadata
- ERC20
- Address
- Ownable
- IFactory
- IRouter
- DadBods

## **Description**

Optimization enabled: Yes

Decimal: 18

Symbol: DADBODS

Max / Total supply: 1,000,000,000

## **Capabilities**

#### **Components**

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	1	4	2

#### **Exposed Functions**

Version	Public	Private	E	cternal	Interna	1
1.0	19	4		40		9

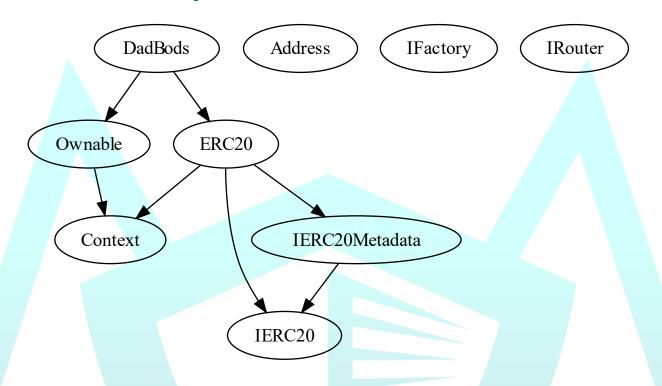

#### **State Variables**

Version	Total	Public
1.0	33	19

#### **Capabilities**

Version	Solidity	Experimental	Can	Uses	Has
	Versions	Features	Receive	Assembly	Destroyable
	Observed		Funds		Contracts
1.0	v0.8.15		Yes	Yes	No

## **Inheritance Graph**

## **Correct implementation of Token Standard**

Tested	Verified
✓	✓

## **Overall Checkup (Smart Contract Security)**

Tested	Verified
<b>√</b>	<b>√</b>

Function	Description	Exist	Tested	Verified
TotalSupply	Information about the total coin or token supply	<b>√</b>	<b>√</b>	<b>√</b>
BalanceOf	Details on the account balance from a specified address	<b>√</b>	<b>√</b>	<b>✓</b>
Transfer	An action that transfers a specified amount of coin or token to a specified address	<b>√</b>	<b>✓</b>	<b>✓</b>
TransferFrom	An action that transfers a specified amount of coin or token from a specified address	<b>√</b>	<b>√</b>	<b>✓</b>
Approve	Provides permission to withdraw specified number of coin or token from a specified address	<b>√</b>	<b>√</b>	<b>✓</b>

## **Verify Claims**

Statement	Exist	Tested	Owner
Renounce Ownership	<b>√</b>	<b>✓</b>	<b>√</b>
Mint	_	_	_
Burn	<b>✓</b>	<b>✓</b>	X
Block	_	_	_
Pause	_	_	_

Verified / Can	<b>✓</b>
Verified / Cannot	X
Unverified / Not checked	
Not Available	_

### **Write Functions of Contract**

1. AdminCallGetStuckBalance	17. rescueBSCTokens
2. AdminHappyHour	18. transfer
3. AdminLastCall	19. transferFrom
4. AdminReset20Tax	20. transferOwnership
5. AdminResetTax	21. updateAllowedTransfer
6. AdminUpdateBuyTaxes	22. updateBuybackWallet
7. AdminUpdateSellTaxes	23. updateCooldown
8. approve	24. updateExemptFee
9. bulkAllowedTransfer	25. updatelsBot
10. bulkExemptFee	26. updateLiquidityProvide
11. bulklsBot	27. updateLiquidityTreshhold
12. decreaseAllowance	28. updateMaxBuyTxLimit
13. enableTrading	29. updateMaxSellTxLimit
14. increaseAllowance	30. updateMaxWalletlimit
15. renounceOwnership	31. updateRouterAndPair
16. rescueBNB	32. updatedeadline

## **Call Graph**

## **SWC Attacks**

ID	Title	Status
SWC-136	Unencrypted Private Data On-Chain	PASSED
<u>SWC-135</u>	Code With No Effects	PASSED
<u>SWC-134</u>	Message call with hardcoded gas amount	PASSED
<u>SWC-133</u>	Hash Collisions with Multiple Variable Length Arguments	PASSED
SWC-132	Unexpected Ether balance	PASSED
SWC-131	Presence of unused variables	PASSED
SWC-130	Right-To Left Override control character (U+202E)	PASSED
SWC-129	Typographical Error	PASSED
SWC-128	DoS With Block Gas Limit	PASSED
<u>SWC-127</u>	Arbitrary Jump with Function Type Variable	PASSED
SWC-126	Insufficient Gas Griefing	PASSED
<u>SWC-125</u>	Incorrect Inheritance Order	PASSED
<u>SWC-124</u>	Write to Arbitrary Storage Location	PASSED
<u>SWC-123</u>	Requirement Violation	PASSED
SWC-122	Lack of Proper Signature Verification	PASSED
<u>SWC-121</u>	Missing Protection against Signature Replay Attacks	PASSED
SWC-120	Weak Sources of Randomness from Chain Attributes	PASSED
SWC-119	Shadowing State Variables	PASSED
SWC-118	Incorrect Constructor Name	PASSED
<u>SWC-117</u>	Signature Malleability	PASSED
<u>SWC-116</u>	Block values as a proxy for time	PASSED
SWC-115	Authorization through tx.origin	PASSED
SWC-114	Transaction Order Dependence	PASSED
<u>SWC-113</u>	DoS with Failed Call	PASSED
SWC-112	Delegate call to Untrusted Callee	PASSED
<u>SWC-111</u>	Use of Deprecated Solidity Functions	PASSED

<u>SWC-110</u>	Assert Violation	PASSED
SWC-109	Uninitialized Storage Pointer	PASSED
SWC-108	State Variable Default Visibility	PASSED
<u>SWC-107</u>	Reentrancy	PASSED
SWC-106	Unprotected SELFDESTRUCT Instruction	PASSED
<u>SWC-105</u>	Unprotected Ether Withdrawal	PASSED
SWC-104	Unchecked Call Return Value	PASSED
SWC-103	Floating Pragma	PASSED
SWC-102	Outdated Compiler Version	PASSED
SWC-101	Integer Overflow and Underflow	PASSED
<u>SWC-100</u>	Function Default Visibility	PASSED

# **AUDIT PASSED**

#### **Low Issues**

A floating pragma is set (SWC-103)	L: 35
Potential use of "block.number" as	L: 590, 762
source of randomness (SWC-120)	

#### **Audit Comments**

- Owner can renounce ownership
- Owner can transfer ownership
- Owner can toggle providing liquidity status
- Owner can update liquidity threshold
- Owner can update total sell taxes up to 25%
- Owner can update total buy taxes up to 25%
- Owner can update router and pair addresses
- Owner can enable trading
- Owner can update deadline
- Owner can update buyback wallet address.
- Owner can update cooldown
- Owner can block users
- Owner can include/exclude addresses from transfers
- Owner can include/exclude addresses from fees
- Owner can update buy transaction limit not less than 0.1%
- Owner can update sell transaction limit not less than 0.1%
- Owner can update max wallet limit not less than 0.1%
- Owner can withdraw tokens from contract
- Owner can withdraw BNB from contract
- Owner cannot pause contract
- Owner cannot mint after initial deployment
