Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a <u>decision</u> to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's SMART CONTRACT.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

LockEarn's team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **LockEarn.**

Description

\$LockEarn and the principle of compounding can help you achieve financial freedom. With our monthly interest rate of 113%, you may simply double your investment every month. This allows you to turn \$1000 into \$10.4 million in less than a year. LockEarn is the first rebase token designed to safeguard you from the Pump and Dump syndrome that plagues small-cap projects while still providing a 2.56% daily compounding interest rate.

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

| Level | Value | Vulnerability |
|---------------|-----------|---|
| Critical | 9 - 10 | An Exposure that can affect the contract functions in several events that can risk and disrupt the contract |
| High | 7 - 8.9 | An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner |
| Medium | 4 - 6.9 | An opening that could affect the outcome in executing the contract in a specific situation |
| Low | 0.1 - 3.9 | An opening but doesn't have an impact on the functionality of the contract |
| Informational | 0 | An opening that consists of information's but will not risk or affect the contract |

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

- 1. Code review that includes the following:
 - Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
 - Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.
- 2. Testing and automated analysis that includes:
 - Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.
- 3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.
- 4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- SafeMathInt
- SafeMath
- IERC20
- IPancakeSwapPair
- IPancakeSwapRouter
- IPancakeSwapFactory
- Ownable
- ERC20Detailed
- IBEP20
- IDividendDistributor
- DividendDistribution
- LockEarn

Description

Optimization enabled: Yes

Decimal: 5

Symbol: LET

Max / Total supply: 100,000

Capabilities

Components

| Version | Contracts | Libraries | Interfaces | Abstract |
|---------|-----------|-----------|------------|----------|
| 1.0 | 3 | 2 | 6 | 1 |

Exposed Functions

| Version | Public | Private | Ex | ternal | Internal |
|---------|--------|---------|----|--------|----------|
| 1.0 | 12 | 1 | | 115 | 29 |

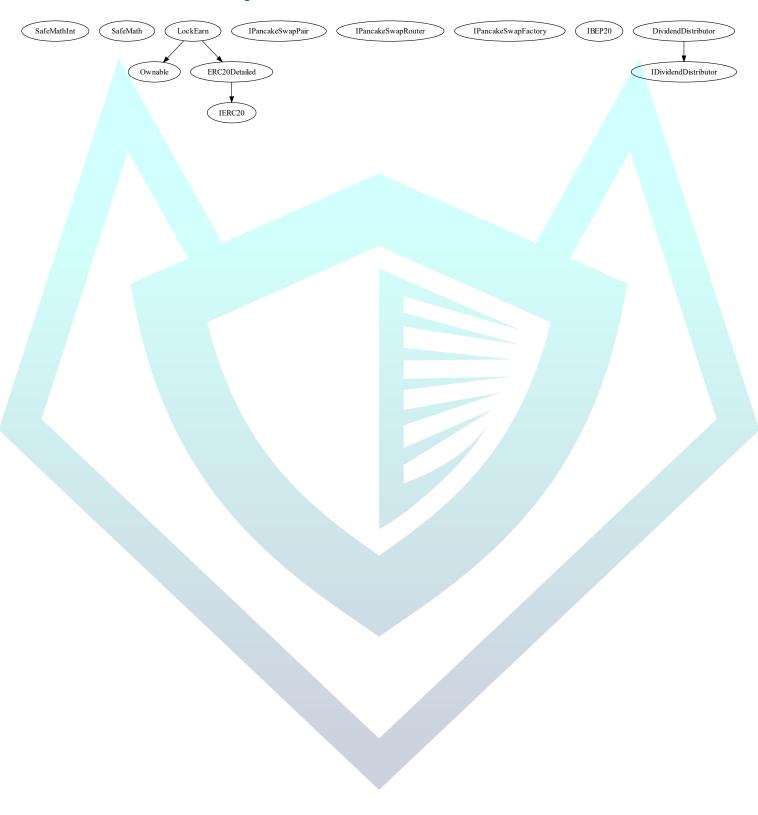

State Variables

| Version | Total | Public |
|---------|-------|--------|
| 1.0 | 75 | 50 |

Capabilities

| Version | Solidity | Experimental | Can | Uses | Has |
|---------|----------|--------------|---------|----------|-------------|
| | Versions | Features | Receive | Assembly | Destroyable |
| | Observed | | Funds | | Contracts |
| 1.0 | v0.7.6 | | Yes | Yes | No |

Call Graph

SWC Attacks

| ID | Title | Status |
|----------------|---|-----------|
| SWC-136 | Unencrypted Private Data On-Chain | PASSED |
| <u>SWC-135</u> | Code With No Effects | PASSED |
| <u>SWC-134</u> | Message call with hardcoded gas amount | PASSED |
| <u>SWC-133</u> | Hash Collisions with Multiple Variable Length Arguments | PASSED |
| <u>SWC-132</u> | Unexpected Ether balance | PASSED |
| SWC-131 | Presence of unused variables | PASSED |
| SWC-130 | Right-To Left Override control character (U+202E) | PASSED |
| SWC-129 | Typographical Error | PASSED |
| SWC-128 | DoS With Block Gas Limit | PASSED |
| <u>SWC-127</u> | Arbitrary Jump with Function Type Variable | PASSED |
| SWC-126 | Insufficient Gas Griefing | PASSED |
| SWC-125 | Incorrect Inheritance Order | PASSED |
| <u>SWC-124</u> | Write to Arbitrary Storage Location | PASSED |
| <u>SWC-123</u> | Requirement Violation | PASSED |
| SWC-122 | Lack of Proper Signature Verification | PASSED |
| <u>SWC-121</u> | Missing Protection against Signature Replay Attacks | PASSED |
| SWC-120 | Weak Sources of Randomness from Chain Attributes | LOW ISSUE |
| SWC-119 | Shadowing State Variables | PASSED |
| <u>SWC-118</u> | Incorrect Constructor Name | PASSED |
| <u>SWC-117</u> | Signature Malleability | PASSED |
| <u>SWC-116</u> | Block values as a proxy for time | PASSED |
| SWC-115 | Authorization through tx.origin | PASSED |
| SWC-114 | Transaction Order Dependence | PASSED |
| SWC-113 | DoS with Failed Call | PASSED |
| SWC-112 | Delegate call to Untrusted Callee | PASSED |
| SWC-111 | Use of Deprecated Solidity Functions | PASSED |

| <u>SWC-110</u> | Assert Violation | PASSED |
|----------------|--------------------------------------|-----------|
| SWC-109 | Uninitialized Storage Pointer | PASSED |
| SWC-108 | State Variable Default Visibility | LOW ISSUE |
| <u>SWC-107</u> | Reentrancy | PASSED |
| <u>SWC-106</u> | Unprotected SELFDESTRUCT Instruction | PASSED |
| <u>SWC-105</u> | Unprotected Ether Withdrawal | PASSED |
| SWC-104 | Unchecked Call Return Value | PASSED |
| SWC-103 | Floating Pragma | LOW ISSUE |
| SWC-102 | Outdated Compiler Version | PASSED |
| SWC-101 | Integer Overflow and Underflow | PASSED |
| SWC-100 | Function Default Visibility | PASSED |

THIS PROJECT IS AUDITED VIA LOCAL FILE, AND IT'S NOT YET DEPLOYED ON LIVE NET

Low Issues

| A floating pragma is set (SWC-103) | L: 5 |
|--------------------------------------|----------------------------------|
| State variable visibility is not set | L: 513, 521, 522, 523, 525, 526, |
| (SWC-105) | 527, 540, 542, 689, 696, 699, |
| | 714, 715, 737, 738, 750, 779, |
| | 780, 781, 782, 783, 810 |
| Potential use of "block.number" as | L: 904, 928, 1220, 1240 |
| source of randomness (SWC-120) | |

Audit Comments

- Deployer can renounce ownership
- Deployer can transfer ownership
- Deployer can set/update fees up to 100%
- Deployer can set/update rebase rate
- Deployer can manually trigger rebase
- Deployer can withdraw all to treasury receiver
- Deployer can set auto rebase
- Deployer can set auto add of liquidity
- Deployer can change fee receivers
- Deployer can include addresses from whitelist
- Deployer can block users
- Deployer can set/update pair address
- Deployer can set liquidity pool
- Deployer can set/update max sell transaction amount
- Deployer can toggle set fees on normal transfers
- Deployer can exclude/include addresses from dividends
- Deployer can disable/enable transfers
- Deployer can make an exemption on trading even if transfers are disabled
- Deployer can set/update distribution gas settings not greater than 750,000
- Deployer can set/update distribution criteria
- Deployer cannot mint after initial deployment
- Deployer cannot burn
- Deployer cannot pause contract
