Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a <u>decision</u> to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within it's **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Description

A decentralized social media platform where users have full control over their content - no censorship, no governing body. You make your own rules. You read and post what you want.

ContractWolf Engagement

15th of January 2022, **Kino** engaged and agrees to audit their smart contract's code by ContractWolf. The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Kino**.

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.

Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability	
Critical	9 - 10	An exposure that can affect the contract functions in several events that can risk and disrupt the contract	
High	7 - 8.9	An exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner	
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation	
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract	
Informational	0	An opening that consists of information's but will not risk or affect the contract	

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

- 1. Code review that includes the following:
 - Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
 - Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.
- 2. Testing and automated analysis that includes:
 - Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.
- 3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.
- 4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- Address
- Context
- IERC20
- IUniswapV2Factory
- IUniswapV2Router01
- IUniswapV2Router02
- Ownable
- SafeERC20
- SafeMath
- Token

Description

Optimization enabled: Yes

Version: v0.8.6

Decimal: 18

Symbol: KINO

Capabilities

Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	1	3	4	2

Exposed Functions

Version	Public	Private
1.0	23	24

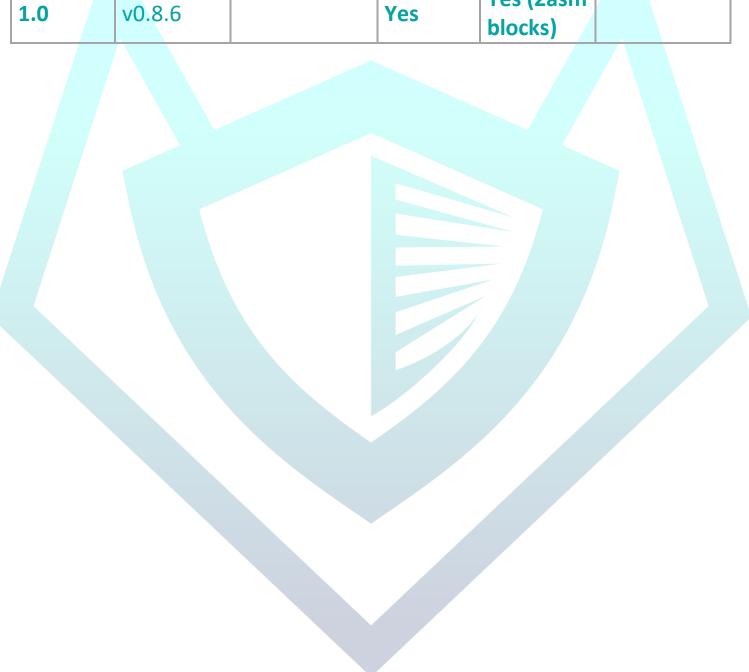

Version	External	Internal
1.0	5	20

State Variables

Version	Total	Public
1.0	34	15

Capabilities

Version	Solidity Versions Observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	v0.8.6		Yes	Yes (2asm blocks)	

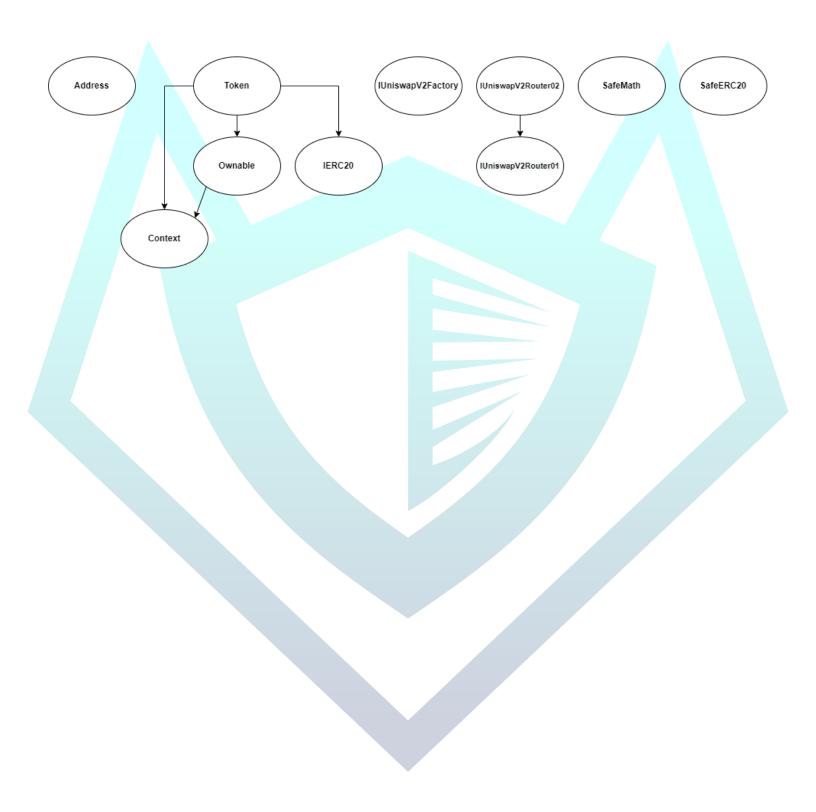

Scope of Work

Kino's team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

Inheritance Graph

Verify Claims

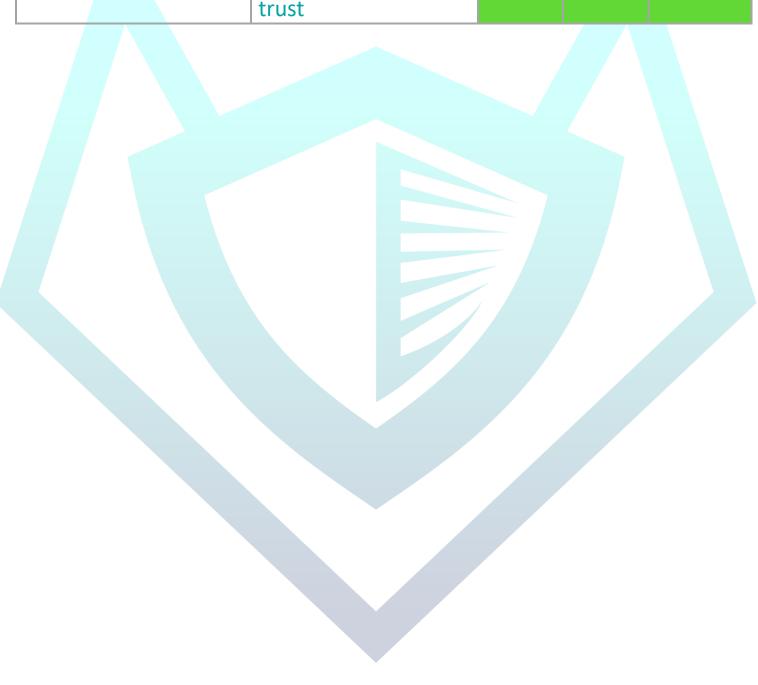

Correct implementation of Token Standard

Tested	Verified
√	X

Function	Description	Exist	Tested	Verified
TotalSupply	Information about the total coin or token supply	√	✓	√
BalanceOf	Details on the account balance from a specified address	√	√	√
Transfer	An action that transfers a specified amount of coin or token to a specified address	√	√	√
TransferFrom	An action that transfers a specified amount of coin or token from a specified address	√	√	√
Approve	Provides permission to withdraw specified number of coin or token from a specified address	√	√	√

Optional implementation

Function	Description	Exist	Tested	Verified
renounceOwnership	Owner renounce ownership for more trust	√	√	√

Deployer cannot mint any new tokens

Statement	Exist	Tested	Verified	File
Deployer can mint	_	_	_	Main

Max / Total supply: 1,000,000,000,000,000 KINO

Deployer cannot burn or lock user funds

Statement	Exist	Tested	Verified
Deployer cannot burn or lock	_	_	_

Deployer cannot pause contract

Statement	Exist	Tested	Verified
Deployer cannot pause	Pu	Pu	P

Overall Checkup (Smart Contract Security)

	Location		
	Requirement	CWE-573: Improper	
SWC-123	Violation	Following of Specification	PASSED
		by Caller	
	Lack of Proper	CWE-345: Insufficient	
SWC-122	Signature	Verification of Data	PASSED
	Verification	<u>Authenticity</u>	
	Missing	CWE-347: Improper	
	Protection	Verification of	
SWC-121	against	Cryptographic	PASSED
	Signature	<u>Signature</u>	
	Replay Attacks		
	Weak Sources	CWE-330: Use of	
	of	Insufficiently	
SWC-120	Randomness	Random Values	PASSED
3113 220	from Chain		7,3322
	Attributes		
	הננווטענכ		

SWC-119	Shadowing State Variables	CWE-710: Improper Adherence to Coding Standards	NOT PASSED
SWC-118	Incorrect Constructor Name	CWE-665: Improper Initialization	PASSED
<u>SWC-117</u>	Signature Malleability	CWE-347: Improper Verification of Cryptographic Signature	PASSED
SWC-116	Timestamp Dependence	CWE-829: Inclusion of Functionality from Untrusted Control Sphere	NOT PASSED
SWC-115	Authorization through tx.origin	CWE-477: Use of Obsolete Function	PASSED
SWC-114	Transaction Order Dependence	CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	PASSED
SWC-113	DoS with Failed Call	CWE-703: Improper Check or Handling of Exceptional Conditions	PASSED
SWC-112	Delegate call to Untrusted Callee	CWE-829: Inclusion of Functionality from Untrusted Control Sphere	PASSED

SWC-111	Use of Deprecated Solidity Functions	CWE-477: Use of Obsolete Function	PASSED
SWC-110	Assert Violation	CWE-670: Always-Incorrect Control Flow Implementation	PASSED
SWC-109	Uninitialized Storage Pointer	CWE-824: Access of Uninitialized Pointer	PASSED
SWC-108	State Variable Default Visibility	CWE-710: Improper Adherence to Coding Standards	PASSED
<u>SWC-107</u>	Reentrancy	CWE-841: Improper Enforcement of Behavioral Workflow	PASSED
SWC-106	Unprotected SELFDESTRUCT Instruction	CWE-284: Improper Access Control	PASSED
<u>SWC-105</u>	Unprotected Ether Withdrawal	CWE-284: Improper Access Control	PASSED
<u>SWC-104</u>	Unchecked Call Return Value	CWE-252: Unchecked Return Value	PASSED
<u>SWC-103</u>	Floating Pragma	CWE-664: Improper Control of a Resource Through its Lifetime	NOT PASSED

<u>SWC-102</u>	Outdated Compiler Version	CWE-937: Using Components with Known Vulnerabilities	PASSED
SWC-101	Integer Overflow and Underflow	CWE-682: Incorrect Calculation	PASSED
SWC-100	Function Default Visibility	CWE-710: Improper Adherence to Coding Standards	PASSED
