CONTRACT WOLF

Blockchain Security - Smart Contract Audits

Security Assessment

February 16, 2022

Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a <u>decision</u> to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

OliveAI team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **OliveAI**.

Description

Olive AI is an artificial intelligence bot developed for religious research and educational purposes. Birth from the idea and the obligation to enhance evangelism through research, crypto education, and robotic automated process (RPA) with the mission to ensure sustainability, the vision to aid automation of enhanced speed processes, bridge the gap between farming and technology to boost accuracy and performance. It also looks to focus on the evolution of youths and awareness about crypto opportunities and enhance growth in information technology.

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.
Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

   - Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
   - Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

   - Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Imported Packages

- Context
- IBEP20
- IBEP20Metadata
- Address
- Ownable
- IFactory
- IRouter
- OLIVEAI

Description

Optimization enabled: Yes

Decimal: 18

Symbol: OLAI

No informational issues found

Findings

Owner can update total buy tax not greater than 10%

```solidity
function SetBuyTaxes(
    uint256 _marketing,
    uint256 _liquidity,
    uint256 _mission,
    uint256 _dev
) external onlyOwner {
    taxes = Taxes(_marketing, _liquidity, _mission, _dev);
    require((_marketing + _liquidity + _mission + _dev) <= 10, "Must keep fees at 10% or less");
}
```

Owner can update total sell tax not greater than 14%

```solidity
function SetSellTaxes(
    uint256 _marketing,
    uint256 _liquidity,
    uint256 _mission,
    uint256 _dev
) external onlyOwner {
    sellTaxes = Taxes(_marketing, _liquidity, _mission, _dev);
    require((_marketing + _liquidity + _mission + _dev) <= 14, "Must keep fees at 14% or less");
}
```

Owner can update max buy, max sell, and max wallet amount not lower than 1% of total supply each

```solidity
function updateMaxTxLimit(uint256 maxBuy, uint256 maxSell, uint256 maxWallet) external onlyOwner {
    require(maxBuy >= 1e6, "Cannot set max buy amount lower than 1%");
    require(maxSell >= 1e6, "Cannot set max sell amount lower than 1%");
    require(maxWallet >= 1e6, "Cannot set max wallet amount lower than 1%");
    maxBuyLimit = maxBuy * 10**decimals();
    maxSellLimit = maxSell * 10**decimals();
    maxWalletLimit = maxWallet * 10**decimals();
}
```

Audit Comments

- Owner can renounce and transfer ownership
- Owner can toggle providing of liquidity
- Owner can update liquidity threshold amount not greater than 1% of tokens
- Owner can update total buy tax not greater than 10%
- Owner can update total sell tax not greater than 14%
- Owner can enable trading
- Owner can update deadline
- Owner can change marketing wallet address
- Owner can update mission wallet address
- Owner can update dev wallet address
- Owner can toggle and update cooldown between trades not greater than 5 minutes
- Owner can exclude/include addresses from fees
- Owner can update max buy, max sell, and max wallet amount not lower than 1% of total supply each
- Owner can withdraw BNB and foreign tokens from contract
- Owner cannot mint after initial deployment
- Owner cannot burn
- Owner cannot pause contract
- Owner cannot block users
