CONTRACT WOLF

Blockchain Security - Smart Contract Audits

Security Assessment

March 6, 2023

Disclaimer

ContractWolf.io audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ContractWolf does not provide any warranty on its released reports.

ContractWolf should not be used as a decision to invest into an audited project and is not affiliated nor partners to its audited contract projects.

ContractWolf provides transparent report to all its "clients" and to its "clients participants" and will not claim any guarantee of bug-free code within its **SMART CONTRACT**.

ContractWolf presence is to analyze, audit and assess the client's smart contract's code.

Each company or projects should be liable to its security flaws and functionalities.

Scope of Work

Flamer.Life AI team agreed and provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract.

The goal of this engagement was to identify if there is a possibility of security flaws in the implementation of the contract or system.

ContractWolf will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository which has been provided by **Flamer.Life AI**.

Description

Find Love. Find Life. Flamer.Life AI. FLAMER users connect with likeminded crypto lovers. You can use your FLAMER account to connect and use A.I with people who you want to match with. Find love on the Blockchain!

Risk Level Classification

Risk Level represents the classification or the probability that a certain function or threat that can exploit vulnerability and have an impact within the system or contract.
Risk Level is computed based on CVSS Version 3.0

Level	Value	Vulnerability
Critical	9 - 10	An Exposure that can affect the contract functions in several events that can risk and disrupt the contract
High	7 - 8.9	An Exposure that can affect the outcome when using the contract that can serve as an opening in manipulating the contract in an unwanted manner
Medium	4 - 6.9	An opening that could affect the outcome in executing the contract in a specific situation
Low	0.1 - 3.9	An opening but doesn't have an impact on the functionality of the contract
Informational	0	An opening that consists of information's but will not risk or affect the contract

Auditing Approach

Every line of code along with its functionalities will undergo manual review to check its security issues, quality, and contract scope of inheritance. The manual review will be done by our team that will document any issues that there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:

- Review of the specifications, sources, and instructions provided to ContractWolf to make sure we understand the size, scope, and functionality of the smart contract.
- Manual review of code, our team will have a process of reading the code line-by-line with the intention of identifying potential vulnerabilities and security flaws.

2. Testing and automated analysis that includes:

- Testing the smart contract functions with common test cases and scenarios, to ensure that it returns the expected results.

3. Best practices review, the team will review the contract with the aim to improve efficiency, effectiveness, clarifications, maintainability, security, and control within the smart contract.

4. Recommendations to help the project take steps to secure the smart contract.

Used Code from other Frameworks/Smart Contracts (Direct Imports)

Findings

Owner can set max wallet and transaction limit

```solidity
function updateMaxWallet(uint256 _maxWallet) external onlyOwner {
    require(_maxWallet>0, "maxWallet>0");
    emit UpdateMaxWallet(_maxWallet, maxWallet);
    maxWallet = _maxWallet;
}
```

```solidity
function updateMaxTransactionAmount(uint256 _maxTransactionAmount)
    external
    onlyOwner
{
    require(_maxTransactionAmount>0, "maxTransactionAmount>0");
    maxTransactionAmount = _maxTransactionAmount;
    emit UpdateMaxTransactionAmount(_maxTransactionAmount, maxTransactionAmount);
}
```

Owner can set fees up to 20%

```solidity
function updateMarketingFee(
    uint16 _sellMarketingFee,
    uint16 _buyMarketingFee
) external onlyOwner {
    require(
        _sellMarketingFee+sellLiquidityFee+sellRewardFee <= 200,
        "sell fee <= 20%"
    );
    require(
        _buyMarketingFee+buyLiquidityFee+buyRewardFee <= 200,
        "buy fee <= 20%"
    );
    emit UpdateMarketingFee(
        _sellMarketingFee,
        _buyMarketingFee,
        sellMarketingFee,
        buyMarketingFee
    );
    sellMarketingFee = _sellMarketingFee;
    buyMarketingFee = _buyMarketingFee;
}

function updateRewardFee(
    uint16 _sellRewardFee,
    uint16 _buyRewardFee
) external onlyOwner {
    require(
        _sellRewardFee+(sellLiquidityFee)+(sellMarketingFee) <= 200,
        "sell fee <= 20%"
    );
    require(
        _buyRewardFee+(buyLiquidityFee)+(buyMarketingFee) <= 200,
        "buy fee <= 20%"
    );
    emit UpdateRewardFee(
        _sellRewardFee,
        _buyRewardFee,
        sellRewardFee,
        buyRewardFee);
    sellRewardFee = _sellRewardFee;
    buyRewardFee = _buyRewardFee;
}
```

Function Comments

- Owner can set total fee not greater than 20%
- Owner can toggle antibot
- Owner can update max wallet limit
- Owner can update max transaction limit
- Owner can renounce ownership
- Owner can transfer ownership
- Owner can exclude addresses from dividends
- Owner can update minimum token balance for dividends amount
- Owner can update swap tokens at amount
- Owner can change dividend tracker address
- Owner can change UniswapV2RouterPair address
- Owner can change UniswapV2Router address
- Owner can exclude/include addresses from fees
- Owner can change marketing wallet address
- Owner can change liquidity pool address
- Owner can change automated market maker pair address
- Owner can exclude/include addresses from max transaction amount
- Owner can update gas for processing between 200,000 and 500,000
- Owner can update claim wait time
- Owner cannot mint after initial deployment
- Owner cannot burn
- Owner cannot block users
- Owner cannot pause contract
